

FREE Resources + Training for Clackamas County Schools

Dear Educators,

Clackamas County Vector Control has teamed up with veteran educator and author Rick Reynolds, founder of Engaging Every Student, and other partners to develop free curriculum and supporting resources. We seek to inspire students to think critically about mosquitoes and other potential disease vectors, including their fascinating life cycles and adaptations, through hands-on experiments and other engaging activities. Please join us in this collaborative effort with partners such as:

- Oregon State University Extension Service
- Center for Research in Environmental Sciences and Technologies (CREST: an innovative science center in the West Linn-Wilsonville School District)
- Clackamas Education Service District

Serious vector-borne diseases such as West Nile virus have been spreading into Oregon, and our students and families need to understand why this is happening and how to protect themselves. Help us engage students by investigating disease vectors like mosquitoes and doing meaningful projects to help keep our communities safe.

We hope you and your students enjoy the fun new “Beware of Mosquitula!” poster and more resources available at fightthebites.com.

Please let us know if you would like more posters or any of these other FREE resources when they are ready:

- **Lesson plans** aligned to the Next Generation Science Standards + Common Core State Standards
- **Class presentations which include live specimens, microscopes, etc.**
- **In-person and online training for teachers**
- **Multimedia presentations**

Thank you so much for ALL you do for our young people, and we hope to support your endeavors.
